

Akrapovic sponsored MotoXXX rider Kyle Lewis

Lockhart Phillips is proud to offer Akrapovic's new off-road motorcycle exhaust systems, which are available in two varieties: Slip-On and Evolution series pipes.

Akrapovic has made its mark in racing at the highest level, winning a combined dozen championships in World Superbike, World Supersport, World Endurance, World Supermotard, World Motorcoss and AMA National Supersport in the past five years. Now, off-roaders can upgrade their bikes with production versions of Akrapovic's title-winning off-road technology.

All Evolution and Slip-On series feature huge increases in power and engine response throughout the entire rpm range combined with acceptable sound levels. Akrapovic is quickly developing a reputation as having the most "rideable" powerband on the market. But don't take it from us, Akrapovic's off-road systems have been winning shootouts and rave reviews from the dirt-bike press since they hit the market last year.

CRF Evolution System (2006)

"This is one eye-catching piece that is significantly lighter than stock. If you want more power but don't want to drastically alter the friendly nature of the stock powerband, this is definitely the pipe for you."
